Faster ... Cleaner ... Better

DIVIDEND Formula M is an exciting development in seed treatment

Now there is a modern, safe and easy to use water-based formulation technology that has all the attributes of fast flow, clean handling, even coverage and high quality visual aspects expected for high performing seed treatment products in cereals.

DIVIDEND Formula M ensures treated seed flows smoothly and efficiently through the application equipment for optimum throughput.

The excellent coverage and visual quality achieved with DIVIDEND Formula M technology gives added confidence in the seed treatment applied.

- High seed treatment throughput
- Reduced dust-off
- Easy cleaning of treating equipment
- Even seed coverage
- Better seed colouring
- Outstanding results
- High level of customer satisfaction

Faster	Cleaner	Better
The enhanced flowability of DIVIDEND Formula M optimizes the performance of seed treatment equipment by providing improvements in equipment throughput efficiency to maximise daily seed treatment output.	DIVIDEND Formula M technology ensures the seed treatment sticks and stays on the seed, where it will have the greatest effect in the field.	DIVIDEND Formula M technology achieves exceptional coverage of the complete seed surface ensuring the best possible disease control.
